### Checkpoint 1: SQL Analytics Findings

The Freedom Deer: Tianchang Li, Hualiang Qin, Qingwei Lan

October 15, 2021

The main goal of our research is to investigate the conditions under which police officers tend to use force on civilians. Specifically we believe that race and environmental conditions play a critical role in this, therefore in this report, we utilized SQL to analyze and answer some important questions. The questions are grouped into sections and each section contains multiple questions about the same topic.

#### 1. Information about Victims and Officers

We would like to first gather some background information about the officers and victims in the use of force cases, such as race distribution. The data in this section is taken from the trr\_trr, data\_officer, and data\_racepopulation datasets.

#### 1a. What is the racial distribution of the victims involved in cases of use of force?

#### Database Query Results:

subject_race	1	count
Black	1	49747
Hispanic		9369
White		6540
Asian/Pacific Islander		431
Native American/Alaskan Native		54

From the results, we can see the race distribution of the subjects involved in the use of force cases. The table shows that black subjects are the dominant race which has contributed to cases more than the total of all other races combined. However, as we know that black people do not dominate the total population in Chicago, this indicates a worth-of-investigating racial discrimination involved in the police use of force.

#### 1b. What is the racial distribution of police officers involved in these cases?

officer_race	count
	1

White		38731
Hispanic	-	15064
Black		10599
Asian/Pacific		2028
Native American/Alaskan Native		310

From the results, we can see the race distribution of police officers involved in use of force cases. At the top is white police officers whose count exceeds the total of the rest of the races, especially in contrast to the number of Asian/Pacific and Native American/Alaskan Native police officers. This potentially leads to a white-dominated culture in police department.

1c. What portion of the total use of force cases involves an officer that is of a different race than that of the victim (cross-race use of force)?

Database Query Results:

cross\_race\_percentage -----0.732046

Based on the results, we can see that cross-race use of force cases make up 73.2% of total use of force cases, which is less surprising considering the fact that victims are dominated by black people and police offers are dominated with white. Nevertheless, 73.2% is high enough to raise follow-up questions about the different dynamics between police and victims. Specifically, we will look into the racial composition of the cross-race cases.

1d. What portion of the cases in use of force containing firearm usage.

Database Query Results:

firearm\_used\_percentage
----0.0153

Based on the results, we can see that only 1.5% use of force cases involved the usage of firearms. This indicates a less number of firearm usage than what we expected, despite large media coverage on this topic.

1e. What are the percentages of use of force cases grouped by officer race and subject race? (i.e. what is the percentage of white officers using force on black subjects)

percentage	officer_race	1	subject_race

0.416733   White	Black
0.157269   Hispanic	Black
0.141796   Black	Black
0.083096   White	Hispanic
0.065161   White	White
0.043256   Hispanic	Hispanic
0.020457   Hispanic	White
0.019950   Asian/Pacific Islander	Black
0.008147   White	I
0.006923   Black	White
0.006849   Black	Hispanic
0.005536   Asian/Pacific Islander	Hispanic
0.004238   White	Asian/Pacific Islander
0.003969   Asian/Pacific Islander	White
0.003357   Native American/Alaskan Nat	tive   Black
0.002552   Hispanic	1
0.001805   Black	1
0.001044   Hispanic	Asian/Pacific Islander
0.000731   Black	Asian/Pacific Islander
0.000627   Native American/Alaskan Nat	tive   Hispanic
0.000537   White	Native American/Alaskan Native
0.000463   Native American/Alaskan Nat	tive   White
0.000418   Asian/Pacific Islander	Asian/Pacific Islander
0.000358   Asian/Pacific Islander	1
0.000194   Hispanic	Native American/Alaskan Native
0.000179   Native American/Alaskan Nat	tive
0.000045   Black	Native American/Alaskan Native
0.000030   Asian/Pacific Islander	Native American/Alaskan Native

The results provides a more detailed view of the racial components of the subjects and police officers in all the use of force cases. A cursive scan shows us that 41% of all cases come from white police officers' use of force on black subjects. Further analysis shows that cases with black subjects make up 71.58% of all use of force cases. This indicates that the black population are more prone to police's use of force.

## 2. Environmental Factors That May Affect an Officer's Decision to Use Force

Next we want to investigate the influence of environmental factors on a police officer's decision to use force. The following questions will looking into some of these factors.

#### 2a. What portion of the use of force happened under different lighting conditions?

lighting_condition		percentage
GOOD ARTIFICIAL	1	0.395291
DAYLIGHT	1	0.293887
NIGHT		0.118295
POOR ARTIFICIAL	Ι	0.111580

	1	0.054283
DUSK		0.021113
DAWN	1	0.005551

This table shows that the use of force cases are dominated by the scenarios with good lighting (either with daylight of good artificial light). This, to some extend, suggests that lack of visibility is not a risk for someone to experience use of force, which is opposite to our hypothesis.

#### 2b. What portion of the use of force happened indoors against outdoors?

#### Database Query Results:

indoor_or_outdoor	1	percentage
Outdoor	1	0.705248
Indoor		0.240962
	1	0.053791

This shows that most cases occurred outdoors with still descent amount of cases happening indoors. Civilians are usually under protection in their residential homes unless under criminal investigation. This leads to the problem of unwarranted search and would be interesting to look into the conditions and the allegation outcomes of these cases.

#### 2c. What portion of the use of force happened under different weather conditions?

#### Database Query Results:

weather_condition	percentage
CLEAR RAIN	0.810218 0.060058 0.056685
OTHER SNOW FOG/SMOKE/HAZE SEVERE CROSS WIND SLEET/HAIL	0.038959   0.027977   0.003312   0.001477   0.001313

This indicates that adverse weather conditions might not be an attribute for use of force which is opposite to our hypothesis. This would allow us to eliminate the influence of weather conditions from our future research.

#### 2d. What portion of the use of force happened under different locations?

Street Sidewalk Residence Apartment Police Facility/Veh Parking Lot Alley Residence Porch/Hallway Residential Yard (Front/Back)
Parking Lot/Garage (Non-Residential)   Other   Chicago Housing Authority Property   Gas Station   Park Property

..... truncated .....

This shows that police's use of force more likely to occur on street/sidewalks but not by much. This doesn't give us much information at the moment.

2e. Under what combinations of different conditions (lighting, indoor or outdoor, weather, location) is a police officer more likely to use force?

#### Database Query Results:

CLEAR   Outdoor           GOOD ARTIFICIAL   Street           5870           CLEAR   Outdoor           DAYLIGHT   Street           5587           CLEAR   Outdoor           DAYLIGHT   Sidewalk           4621           CLEAR   Outdoor           GOOD ARTIFICIAL   Sidewalk           4290           CLEAR   Outdoor           NIGHT   Street           2278	CLEAR   Outdoor           GOOD ARTIFICIAL   Street           5870           CLEAR   Outdoor           DAYLIGHT   Street           5587	
CLEAR   Outdoor   NIGHT   Sidewalk   1891 CLEAR   Indoor   GOOD ARTIFICIAL   Police Facility/Veh Parking Lot   1836 CLEAR   Indoor   GOOD ARTIFICIAL   Apartment   1498	CLEAR   Outdoor   NIGHT   Street   2278	CLEAR   Outdoor   DAYLIGHT   Street   5587
CLEAR   Indoor   GOOD ARTIFICIAL   Residence   1357  CLEAR   Outdoor   POOR ARTIFICIAL   Street   1313	CLEAR   Indoor   GOOD ARTIFICIAL   Police Facility/Veh Parking Lot   1836 CLEAR   Indoor   GOOD ARTIFICIAL   Apartment   1498 CLEAR   Indoor   GOOD ARTIFICIAL   Residence   1357	CLEAR   Outdoor   NIGHT   Street   2278 CLEAR   Outdoor   NIGHT   Sidewalk   1891 CLEAR   Indoor   GOOD ARTIFICIAL   Police Facility/Veh Parking Lot   1836 CLEAR   Indoor   GOOD ARTIFICIAL   Apartment   1498 CLEAR   Indoor   GOOD ARTIFICIAL   Residence   1357
	CLEAR   Outdoor   NIGHT   Street   2278	
	OLLIN   GUGGGG   MIGHT   DIGOWATH	CLEAR   Outdoor   NIGHT   Street   2278

..... truncated .....

This table provides a more comprehensive view of the narratives for the most common scenarios of police's use of force. Cases often time happened with good lighting on the street.

# 3. How does the influence of the top 10 combinations of conditions vary from race to race?

Race: Black

#### Database Query Results:

weather	indoor_outdoor	0 0	location +	pct
CLEAR	Outdoor	DAYLIGHT	Street	0.0891
CLEAR	Outdoor	GOOD ARTIFICIAL	Street	0.0818
CLEAR	Outdoor	DAYLIGHT	Sidewalk	0.0774

CLEAR	Indoor	GOOD ARTIFICIAL	Residence	0.0325
CLEAR	Outdoor	DAYLIGHT	Alley	0.0302
CLEAR	Indoor	GOOD ARTIFICIAL	Police Facility/Veh Parking Lot	0.0278

Race: Native American/Alaskan Native

#### Database Query Results:

weather	indoor_outdoor	lighting	location	pct
CLEAR CLEAR	Outdoor   Outdoor	GOOD ARTIFICIAL   DAYLIGHT	Sidewalk   Street	0.0926   0.0741
CLEAR	Outdoor	DAYLIGHT	Sidewalk	0.0741
CLEAR	   Indoor	   GOOD ARTIFICIAL	Street   Apartment	0.0741
CLEAR	Outdoor	GOOD ARTIFICIAL	Street	0.0741
CLEAR CLEAR	Outdoor   Outdoor	DAYLIGHT   NIGHT	Alley   Alley	0.0370   0.0370
CLEAR CLEAR	Indoor   Outdoor	GOOD ARTIFICIAL   GOOD ARTIFICIAL	Residence Porch/Hallway   Parking Lot/Garage (Non-Residential)	0.0370   0.0370

Based on the results for each race, we can see that most use of force cases happen outdoors in clear weather under good lighting conditions. Further analysis shows that these results do not differ much between different races. The interesting part here is that most use of force cases don't happen under bad conditions as we hypothesized. This probably indicates that most police activity happens under favorable conditions and that police activity is not common when conditions are bad. Further research should be conducted to dig deeper into each of these conditions.

#### Conclusion and Future Research

Based on the race distributions of victims and police officers, we can see that the black population is the dominant race in the victims of police use of force. We also saw that cross-race use of force is common and made up 73% of all the use of force cases. Furthermore we also saw that a white police officer is more likely to use force on a black subject. These results suggest that the black population is more prone to police use of force and we would like to dig deeper into racial issues.

We also investigated how environmental conditions affected a police officer's decision to use force and concluded that most police use of force cases happened in favorable environmental conditions, such as good lighting and good weather. Since these environmental conditions didn't seem to influence an officer's decision that much, we would like to further investigate the physical location in which the case occurred, such as the neighborhood's socioeconomic status, median income, and crime rate. We believe that this will provide us with more information going forward.
